Aaron Judge XBH Analysis vs Noah Cameron

Model (tonight): Raw P(XBH) 16.3% | Adj P(XBH) 16.0% | Conf 0.982 (Medium)

3 PA vs starte

Confidence factors: pitcher data 1.0 | BvP HR 1.05 | BvP hit 1.05 | staleness 0.85 | convergence HR 1.1 | convergence hit 1.1

Career Contact Profile

578 career X
extra-base ju

Career K rate: 27.4% ? elevated above ~22% league average.

Extra-base context: 203 doubles, 7 triples, 368 HR ? gap power is real.

Exit velocity on all career XBH: mean 106.9 mph ? firm contact vs league XBH EV (~95 mph in this population).

XBH by pitch type (top): FF 201 (.140 XBH), SI 112 (.122 XBH), SL 82 (.090 XBH), CH 48 (.091 XBH), FC 43 (.115 XBH), CU 33 (.119 XBH).

That's the ma
actually throw

The swing decisions show up in the buckets: when Cameron leans on what he trusts, Judge already has an XBH library on those pitch codes. League XBH/PA in this dataset is ~7.9% ? Judge is north of that baseline, so the XBH prop isn't a charity case; it's extra-base skill pressed against a specific pitch diet.

One-sentence summary: Judge is a solid bat who has an elevated K rate at 27%, and Cameron's arsenal tests that profile.

The Cameron-Specific XBH Case

BvP: 1-for-3 (

BvP K rate: 67% ? ugly.

When Judge drives the ball against Cameron, XBHs show up. The BvP line (1 XBH in 3 PA) hints at the extra-base profile working against this arsenal.

Cameron's XBH Vulnerability

Career: 37 XB

Breakdown allowed: 17 doubles, 2 triples, 18 HR.

K rate: 20.5% | BB rate: 7.7% ? decent strikeout rate limits some extra-base opportunity.

Arsenal breakdown: Fastball 48% (~90 mph), Breaking 33%, Offspeed 19%.

XBH allowed by handedness: vs LHB 8.1% (11 XBH in 135 PA) | vs RHB 6.2% (26 in 422). Judge bats right.

2026 (qualifying file): ERA 3.94, WHIP 1.25, BB/9 ?, 16.0 IP. Solid early numbers.

Where Judge Ranks Tonight

1 of 389

The Verdict on the XBH Bet

For: 11.6% ca
XBH in 3 PA ?

Against: BvP K rate 67% (2 K in 3 PA). Judge's 27.4% career K rate is elevated; model P(K) ~24% tonight. Staleness 0.85 still trims confidence.

Net: ~16.0% per PA adjusted ? ~40.8% over 3 PA ? about 1-in-2 for at least one XBH. That's the slate's inner circle (#1 overall, #1 on NYY). This is a matchup play ? if you don't buy the Cameron vulnerability thesis, cut enthusiasm; if you do, Judge is exactly the type of hitter you'd target for an XBH.

Manny Machado XBH Analysis vs Yusei Kikuchi

Model (tonight): Raw P(XBH) 15.0% | Adj P(XBH) 15.8% | Conf 1.052 (High)

3 PA vs starte

Confidence factors: pitcher data 1.0 | BvP HR 1.15 | BvP hit 1.1 | staleness 0.85 | convergence HR 1.1 | convergence hit 1.1

Career Contact Profile

671 career X
extra-base ju

Career K rate: 17.5% ? well below ~22% league average.

Extra-base context: 323 doubles, 12 triples, 336 HR ? gap power is real.

Exit velocity on all career XBH: mean 102.7 mph ? firm contact vs league XBH EV (~95 mph in this population).

XBH by pitch type (top): FF 230 (.110 XBH), SL 129 (.107 XBH), SI 115 (.082 XBH), CH 57 (.082 XBH), FC 48 (.093 XBH), CU 35 (.095 XBH).

That's the ma
actually throw

The swing decisions show up in the buckets: when Kikuchi leans on what he trusts, Machado already has an XBH library on those pitch codes. League XBH/PA in this dataset is ~7.9% ? Machado is north of that baseline, so the XBH prop isn't a charity case; it's extra-base skill pressed against a specific pitch diet.

One-sentence summary: Machado is a solid bat who keeps the K rate low at 18%, and Kikuchi's arsenal feeds right into that profile.

The Kikuchi-Specific XBH Case

BvP: 4-for-12

BvP K rate: 8% ? clean.

When Machado drives the ball against Kikuchi, XBHs show up. The BvP line (2 XBH in 12 PA) confirms the extra-base profile working against this arsenal.

Kikuchi's XBH Vulnerability

Career: 366 X

Breakdown allowed: 186 doubles, 15 triples, 165 HR.

K rate: 23.8% | BB rate: 8.4% ? decent strikeout rate limits some extra-base opportunity.

Arsenal breakdown: Fastball 36% (~95 mph), Breaking 52%, Offspeed 12%.

XBH allowed by handedness: vs LHB 6.8% (60 XBH in 887 PA) | vs RHB 9.1% (306 in 3364). Machado bats right.

2026 (qualifying file): ERA 7.5, WHIP 1.89, BB/9 ?, 18.0 IP. That's rough early form ? you're betting current-version Kikuchi tonight.

Where Machado Ranks Tonight

2 of 389

The Verdict on the XBH Bet

For: 9.7% car
in 12 PA ? ex

Against: BvP K rate 8% (1 K in 12 PA). Machado's 17.5% career K rate is manageable; model P(K) ~25% tonight. Staleness 0.85 still trims confidence.

Net: ~15.8% per PA adjusted ? ~40.3% over 3 PA ? about 1-in-2 for at least one XBH. That's the slate's inner circle (#2 overall, #1 on SD). This is a matchup play ? if you don't buy the Kikuchi vulnerability thesis, cut enthusiasm; if you do, Machado is exactly the type of hitter you'd target for an XBH.

Career Contact Profile

369 career X
extra-base ju

Career K rate: 24.9% ? elevated above ~22% league average.

Extra-base context: 175 doubles, 8 triples, 186 HR ? gap power is real.

Exit velocity on all career XBH: mean 100.5 mph ? firm contact vs league XBH EV (~95 mph in this population).

XBH by pitch type (top): FF 133 (.106 XBH), SI 83 (.115 XBH), SL 49 (.076 XBH), CH 40 (.113 XBH), FC 28 (.105 XBH), CU 16 (.071 XBH).

That's the ma
throws.

The swing decisions show up in the buckets: when Kremer leans on what he trusts, Hoskins already has an XBH library on those pitch codes. League XBH/PA in this dataset is ~7.9% ? Hoskins is north of that baseline, so the XBH prop isn't a charity case; it's extra-base skill pressed against a specific pitch diet.

One-sentence summary: Hoskins is a power-over-contact bat who has an elevated K rate at 25%, and Kremer's arsenal tests that profile.

The Kremer-Specific XBH Case

BvP: 2-for-6 (

BvP K rate: 17% ? clean.

When Hoskins drives the ball against Kremer, XBHs show up. The BvP line (1 XBH in 6 PA) hints at the extra-base profile working against this arsenal.

Kremer's XBH Vulnerability

Career: 225 X

Breakdown allowed: 123 doubles, 7 triples, 95 HR.

K rate: 20.4% | BB rate: 7.8% ? decent strikeout rate limits some extra-base opportunity.

Arsenal breakdown: Fastball 65% (~91 mph), Breaking 13%, Offspeed 21%.

XBH allowed by handedness: vs LHB 8.1% (108 XBH in 1334 PA) | vs RHB 7.8% (117 in 1505). Hoskins bats right.

2026: No qualifying data yet for Kremer.

Where Hoskins Ranks Tonight

The Verdict on the XBH Bet

For: 9.9% car
in 6 PA ? barr

Against: BvP K rate 17% (1 K in 6 PA). Hoskins's 24.9% career K rate is manageable; model $P(K) \sim 29\%$ tonight. Staleness 0.85 still trims confidence.

Net: $\sim 11.2\%$ per PA adjusted ? $\sim 30.0\%$ over 3 PA ? about 1-in-3 for at least one XBH. That's the slate's top tier (#10 overall, #1 on CLE). This is a matchup play ? if you don't buy the Kremer vulnerability thesis, cut enthusiasm; if you do, Hoskins is exactly the type of hitter you'd target for an XBH.
