

Section 7: Top 10 HR Full Analysis

Eugenio Suarez HR Analysis vs Taj Bradley

Model (tonight): Raw P(HR) 7.27% | Adj P(HR) 7.81% | Conf 1.075 (High)

Confidence factors: pitcher data 1.0 | BvP HR 1.15 | BvP hit 1.05 | staleness 0.85 | convergence HR 1.1 | convergence hit 1.0

Career Power Profile

Peak season: 2019 (49 HR).

Exit velocity on career HRs: mean 104.2 mph | max 113.8 mph ? solidly hard HR contact vs league HR EV (~104 mph).

Launch angle on career HRs: mean 29.9 deg ? normal fly-ball HR shape.

HR by pitch type (top): FF 111 (.220 BA in sample), SL 67 (.183 BA in sample), SI 53 (.262 BA in sample), CH 33 (.195 BA in sample), FC 27 (.259 BA in sample), CU 12 (.173 BA in sample).

When Bradley tries to run the fastball up or bury the breaker down, Suarez's historical HR distribution says the counterpunch already exists: heaters for lift, secondaries for leverage. League HR/PA in this dataset sits near 3.1% ? Suarez lives north of that baseline, so you're not manufacturing a HR story; you're stacking real outcomes on a real pitch map.

One-sentence summary: FF is the bread and butter ? 111 of 321 career HRs came off FF, and Suarez has shown he can elevate off Bradley-type stuff too.

The Bradley-Specific HR Case

Date (Statcast) Pitch type Velo EV LA

Those HRs came on FF at avg 105 mph EV ? solid contact. Bradley leans on that pitch type; Suarez's BvP HR is on-brand with career HR history.

Narrative: BvP K rate 12% (1 K in 8) is clean ? contact happens at a reasonable rate. When he does connect in this matchup, the ball has left before.

Bradley's HR Vulnerability

HR allowed by pitch (top): FF 34, FC 15, FS 8, CU 5, SI 2.

Fastball: ~94.1 mph (profile), ~68% fastball-class usage ? hittable velocity if location slips.

2026 (qualifying file): ERA 1.25, WHIP 1.25, BB/9 ?, 21.7 IP. Solid early numbers.

vs LHB: 28 HR in 839 PA (3.34%) | vs RHB: 36 HR in 804 PA (4.48%). Suarez bats right ? slight platoon edge for the batter.

K / BB: Career K% ~25.0%, BB% ~8.6% ? decent strikeout rate limits some HR upside.

Where Suarez Ranks Tonight

The Verdict on the HR Bet

Against: 1 K in 8 BvP PA ? when this matchup goes wrong, it goes strikeout wrong. Suarez's 27.5% career K rate is elevated; model P(K) ~32% tonight. Bradley's career HR rate is elevated ? if you think 2026 is noise, you're fading the thesis. Staleness 0.85 still trims confidence.

Net: ~7.8% per PA adjusted ? ~21.7% over 3 PA ? about 1-in-5 for at least one HR in a three-PA window. That's the slate's inner circle (#1 overall, #1 on CIN). This is both a power profile play and a matchup play ? if you don't buy the Bradley vulnerability thesis, cut enthusiasm; if you do, Suarez is exactly the type of power bat you'd short-list for HR.

Aaron Judge HR Analysis vs Noah Cameron

Model (tonight): Raw P(HR) 7.69% | Adj P(HR) 7.55% | Conf 0.982 (Medium)

Confidence factors: pitcher data 1.0 | BvP HR 1.05 | BvP hit 1.05 | staleness 0.85 | convergence HR 1.1 | convergence hit 1.1

Career Power Profile

368 career HR  
real power, no

Peak season: 2022 (62 HR).

Career Power Profile

279 career HR  
real power, no

Peak season: 2018 (38 HR).

Exit velocity on career HRs: mean 103.5 mph | max 112.8 mph ? solidly hard HR contact vs league HR EV (~104 mph).

Launch angle on career HRs: mean 28.4 deg ? normal fly-ball HR shape.

HR by pitch type (top): FF 123 (.243 BA in sample), SI 44 (.285 BA in sample), SL 40 (.209 BA in sample), CH 36 (.262 BA in sample), FC 11 (.227 BA in sample), CU 10 (.216 BA in sample).

FF is the eng  
file) and SL (  
usage pitches

When Taillon tries to run the fastball up or bury the breaker down, Lindor's historical HR distribution says the counterpunch already exists: heaters for lift, secondaries for leverage. League HR/PA in this dataset sits near 3.1% ? Lindor lives north of that baseline, so you're not manufacturing a HR story; you're stacking real outcomes on a real pitch map.

One-sentence summary: FF is the bread and butter ? 123 of 279 career HRs came off FF, and Lindor has shown he can elevate off Taillon-type stuff too.

The Taillon-Specific HR Case

BvP: 3-for-16

Date (Statcast) Pitch type Velo EV LA

2025-05-09 F

Those HRs came on FF at avg 102 mph EV ? solid contact. Taillon leans on that pitch type; Lindor's BvP HR is on-brand with career HR history.

Narrative: BvP K rate 31% (5 K in 16) is ugly ? when he's not putting the ball in play, he's whiffing. When he does connect in this matchup, the ball has left before.

Taillon's HR Vulnerability

Career: 170 HR  
extreme HR fr

HR allowed by pitch (top): FF 71, SI 20, CH 19, FC 19, CU 16.

Fastball: ~90.7 mph (profile), ~60% fastball-class usage ? hittable velocity if location slips.

2026 (qualifying file): ERA 4.86, WHIP 1.26, BB/9 ?, 16.7 IP. Solid early numbers.

vs LHB: 86 HR in 2,512 PA (3.42%) | vs RHB: 84 HR in 2,620 PA (3.21%). Lindor bats right ? no platoon hide here.

K / BB: Career K% ~20.9%, BB% ~5.7% ? decent strikeout rate limits some HR upside.

Where Lindor Ranks Tonight

9 of 389

The Verdict on the HR Bet

For: 4.07% c  
double baseli

Against: 5 K in 16 BvP PA ? when this matchup goes wrong, it goes strikeout wrong. Lindor's 16.3% career K rate is manageable; model P(K) ~16% tonight. Taillon's career HR rate is around league ? if you think 2026 is noise, you're fading the thesis. Staleness 0.85 still trims confidence.

Net: ~6.8% per PA adjusted ? ~19.0% over 3 PA ? about 1-in-5 for at least one HR in a three-PA window. That's the slate's top tier (#9 overall, #2 on NYM). This is both a power profile play and a matchup play ? if you don't buy the Taillon vulnerability thesis, cut enthusiasm; if you do, Lindor is exactly the type of power bat you'd short-list for HR.

Michael Busch HR Analysis vs Freddy Peralta

Model (tonight): Raw P(HR) 6.11% | Adj P(HR) 6.57% | Conf 1.075 (High)

3 PA vs starte

Confidence factors: pitcher data 1.0 | BvP HR 1.15 | BvP hit 0.75 | staleness 0.85 | convergence HR 1.1 | convergence hit 0.85

Career Power Profile

57 career HR  
real power, no

Peak season: 2025 (34 HR).

Exit velocity on career HRs: mean 105.0 mph | max 111.9 mph ? solidly hard HR contact vs league HR EV (~104 mph).

Launch angle on career HRs: mean 31.0 deg ? normal fly-ball HR shape.

HR by pitch type (top): FF 24 (.203 BA in sample), SL 9 (.183 BA in sample), CH 8 (.257 BA in sample), CU 6 (.255 BA in sample), SI 4 (.202 BA in sample), FC 3 (.290 BA in sample).

FF is the engi  
and CH (8) ?  
pitches ? Bus

When Peralta tries to run the fastball up or bury the breaker down, Busch's historical HR distribution says the counterpunch already exists: heaters for lift, secondaries for leverage. League HR/PA in this dataset sits near 3.1% ? Busch lives north of that baseline, so you're not manufacturing a HR story; you're stacking real outcomes on a real pitch map.

One-sentence summary: FF is the bread and butter ? 24 of 57 career HRs came off FF, and Busch has shown he can elevate off Peralta-type stuff too.

The Peralta-Specific HR Case

BvP: 2-for-20

Date (Statcast) Pitch type Velo EV LA

2024-05-28 C

Those HRs came on CU at avg 109 mph EV ? violent contact. Peralta leans on that pitch type; Busch's BvP HR is on-brand with career HR history.

Narrative: BvP K rate 35% (7 K in 20) is ugly ? when he's not putting the ball in play, he's whiffing. When he does connect in this matchup, the ball has left before.

Peralta's HR Vulnerability

Career: 118 f  
extreme HR f

HR allowed by pitch (top): FF 78, CU 13, CH 9, SL 9, ST 9.

Fastball: ~94.8 mph (profile), ~53% fastball-class usage ? hittable velocity if location slips.

2026 (qualifying file): ERA 3.86, WHIP 1.14, BB/9 ?, 21.0 IP. Solid early numbers.

vs LHB: 47 HR in 1,936 PA (2.43%) | vs RHB: 71 HR in 1,923 PA (3.69%). Busch bats right ? slight platoon edge for the batter.

K / BB: Career K% ~29.9%, BB% ~9.3% ? high K rate makes it harder to put bat on ball.

Where Busch Ranks Tonight

10 of 38

The Verdict on the HR Bet

For: 4.59% c  
baseline. BvP

Against: 7 K in 20 BvP PA ? when this matchup goes wrong, it goes strikeout wrong. Busch's 26.4% career K rate is elevated; model P(K) ~29% tonight. Peralta's career HR rate is around league ? if you think 2026 is noise, you're fading the thesis. Staleness 0.85 still trims confidence.

Net: ~6.6% per PA adjusted ? ~18.4% over 3 PA ? about 1-in-5 for at least one HR in a three-PA window. That's the slate's top tier (#10 overall, #1 on CHC). This is both a power profile play and a matchup play ? if you don't buy the Peralta vulnerability thesis, cut enthusiasm; if you do, Busch is exactly the type of power bat you'd short-list for HR.
