

Section 8: Top 10 Hit Full Analysis

Steven Kwan Hit Analysis vs Dean Kremer

Model (tonight): Raw P(Hit) 31.9% | Adj P(Hit) 32.9% | Conf 1.029 (Medium)

Confidence factors: pitcher data 1.0 | BvP HR 0.8 | BvP hit 1.1 | staleness 0.85 | convergence HR 0.85 | convergence hit 1.1

Career Contact Profile

Career K rate: 9.5% ? well below ~22% league average.

Extra-base context: 106 doubles, 18 triples, 36 HR ? developing power profile.

Exit velocity on all career hits: mean 87.4 mph ? contact quality is more placement than pure smoke ? still plays if the pitcher leaks barrels.

Hits by pitch type (top): FF 253 (.253 BA), SI 123 (.275 BA), CH 72 (.251 BA), SL 62 (.206 BA), FC 44 (.254 BA), CU 32 (.240 BA).

The swing decisions show up in the buckets: when Kremer leans on what he trusts, Kwan already has a hit library on those pitch codes. League BA in this dataset is ~.243 ? Kwan is around of that baseline, so the hit prop isn't a charity case; it's a contact skill pressed against a specific pitch diet.

One-sentence summary: Kwan is a solid bat who keeps the K rate low at 9%, and Kremer's arsenal tests that profile.

The Kremer-Specific Hit Case

BvP K rate: 9% ? clean.

When Kwan makes contact against Kremer, hits happen. The BvP BA of .364 confirms the contact profile working against this arsenal.

Kremer's Hit Vulnerability

K rate: 20.4% | BB rate: 7.8% ? decent strikeout rate limits some contact opportunity.

Arsenal breakdown: Fastball 65% (~91 mph), Breaking 13%, Offspeed 21%.

BA allowed by handedness: vs LHB .246 (298 hits in 1208 AB) | vs RHB .246 (347 in 1409). Kwan bats right.

2026: No qualifying data yet for Kremer.

Where Kwan Ranks Tonight

The Verdict on the Hit Bet

Against: BvP K rate 9% (1 K in 11 PA). Kwan's 9.5% career K rate is manageable; model P(K) ~10% tonight. Staleness 0.85 still trims confidence.

Net: ~32.9% per PA adjusted ? ~69.7% over 3 PA ? about 1-in-2 for at least one hit. That's the slate's inner circle (#1 overall, #1 on CLE). This is a matchup play ? if you don't buy the Kremer vulnerability thesis, cut enthusiasm; if you do, Kwan is exactly the type of hitter you'd target for a hit.

Aaron Judge Hit Analysis vs Noah Cameron

Model (tonight): Raw P(Hit) 31.9% | Adj P(Hit) 31.4% | Conf 0.982 (Medium)

Confidence factors: pitcher data 1.0 | BvP HR 1.05 | BvP hit 1.05 | staleness 0.85 | convergence HR 1.1 | convergence hit 1.1

Career Contact Profile

Career K rate: 27.4% ? elevated above ~22% league average.

Extra-base context: 203 doubles, 7 triples, 368 HR ? gap power is real.

Exit velocity on all career hits: mean 101.5 mph ? firm contact vs league hit EV (~87 mph in this population).

Hits by pitch type (top): FF 392 (.274 BA), SI 280 (.306 BA), SL 178 (.197 BA), FC 97 (.260 BA), CH 95 (.181 BA), CU 64 (.231 BA).

That's the ma
actually throw

The swing decisions show up in the buckets: when Cameron leans on what he trusts, Judge already has a hit library on those pitch codes. League BA in this dataset is ~.243 ? Judge is around of that baseline, so the hit prop isn't a charity case; it's a contact skill pressed against a specific pitch diet.

One-sentence summary: Judge is a solid bat who has an elevated K rate at 27%, and Cameron's arsenal tests that profile.

The Cameron-Specific Hit Case

BvP: 1-for-3 (

BvP K rate: 67% ? ugly.

When Judge makes contact against Cameron, hits happen. The BvP BA of .333 confirms the contact profile working against this arsenal.

Cameron's Hit Vulnerability

Career: 109 h

K rate: 20.5% | BB rate: 7.7% ? decent strikeout rate limits some contact opportunity.

Arsenal breakdown: Fastball 48% (~90 mph), Breaking 33%, Offspeed 19%.

BA allowed by handedness: vs LHB .158 (20 hits in 126 AB) | vs RHB .229 (89 in 388). Judge bats right.

2026 (qualifying file): ERA 3.94, WHIP 1.25, BB/9 ?, 16.0 IP. Solid early numbers.

Where Judge Ranks Tonight

2 of 389

The Verdict on the Hit Bet

For: .240 car
contact has h

Against: BvP K rate 67% (2 K in 3 PA). Judge's 27.4% career K rate is elevated; model P(K) ~24% tonight. Staleness 0.85 still trims confidence.

Net: ~31.4% per PA adjusted ? ~67.7% over 3 PA ? about 1-in-2 for at least one hit. That's the slate's inner circle (#2 overall, #1 on NYY). This is a matchup play ? if you don't buy the Cameron vulnerability thesis, cut enthusiasm; if you do, Judge is exactly the type of hitter you'd target for a hit.

Jeff McNeil Hit Analysis vs Erick Fedde

Model (tonight): Raw P(Hit) 29.7% | Adj P(Hit) 30.6% | Conf 1.029 (Medium)

3 PA vs starte
